

JIBRAM JIMENEZ-LOZA

San Francisco, CA | JibramSWE@gmail.com | jibram.net | linkedin.com/in/jibram

PROFESSIONAL SUMMARY

Software and ML engineer with 5+ years of experience delivering production ML, data, and full-stack systems. Built revenue-impacting ranking and MLOps infrastructure at Google, customer-data ingestion workflows at Datavant, and web/application foundations for early-stage products.

EXPERIENCE

Nob Hill Labs Aug 2026 to Present Senior Software Engineer | Contract client: Letta.ai

- Built and integrated a packaged smoke-test stage into the Letta desktop app release pipeline; caught and fixed a Linux regression and established automated gating before production promotion.

Chelys / HumaniCore Mar 2026 to Present Independent Software Engineer

- Built and deployed the chelys.io and humanicore.ai websites, configuring DNS, GitHub-connected Vercel preview and production deployments, and initial AWS/Supabase services.
- Implemented an Astro server-side user-submission flow with input scrubbing and rate limiting; contributed early technical and product-direction input for both pre-seed initiatives.

Datavant Sep 2025 to Nov 2025 Software Engineer

- Extended a customer data-ingestion workflow for a client-specific schema, including Snowflake-backed data loading, database migrations, and intermediate-table transformations for a production searchable database.
- Integrated the new data with an existing customer-matching and heuristic-ranking workflow across Python/FastAPI services, AWS RDS, and Snowflake.

Google Oct 2021 to Nov 2024 Software Engineer

- Engineered ML-driven reserve-pricing models to optimize yield in sparse auction environments, improving market efficiency and driving over 2.5% in revenue gains (\$10M+).
- Extended large-scale data and MLOps pipelines for deep neural networks using Google's C++ distributed framework, Flume, and TFX; improved accuracy by 10% across new verticals.
- Automated hyperparameter tuning with Google Vizier/Bayesian optimization by creating a simulation pipeline to evaluate model configurations after release, saving 10 developer-hours per cycle.
- Deployed region-specific model architectures, optimizing inference and ad ranking for targeted geographies to maximize click-through rate and revenue.

Ancestry Jan 2020 to Oct 2021 Associate Software Engineer

- Optimized checkout UX through iterative experiments on component design, improving conversion rates.
- Contributed to over 5% user growth with go-to-market features that enabled users in new international markets.
- Maintained regex-based checkout-form validation, improving data accuracy and preventing invalid submissions.

Ancestry May 2019 to Aug 2019 Software Developer Intern

- Built and shipped frontend UI components and user flows for the Commerce platform using React, Redux, and JavaScript.
- Raised core component-library code coverage above 90% with Jest and Cypress; reduced page-load time by 30% by replacing third-party dependencies.

Computer Vision Lab, UC Merced Jan 2019 to May 2019 Undergraduate Researcher

- Researched converting audio recordings into spectrograms for bird-species classification with convolutional neural networks in PyTorch.

SKILLS

Languages: Python, C++, SQL, JavaScript / TypeScript

ML and Data: TensorFlow, TFX, Pandas, scikit-learn, Snowflake

Backend and Cloud: AWS, AWS RDS, GCP, FastAPI, Supabase, Vercel, Astro, gRPC, Node.js

Frontend and Testing: React, Redux, HTML/CSS, Jest, Cypress

EDUCATION

University of California, Merced | B.S. in Computer Science and Engineering, 2019 | GPA: 3.6 | Honors
